

# 2023 SILICON VALLEY LATINO REPORT CARD

**Hispanic  
Foundation**  
of Silicon Valley

# Hispanic Foundation

of Silicon Valley

## OUR MISSION

The Hispanic Foundation of Silicon Valley is dedicated to inspiring community philanthropy and engaging people to invest in the educational achievement, leadership development, research, and convening and engaging the Hispanic community to improve the quality of life for Latinos and the Silicon Valley region.

## OUR FOCUS

**Excel:** We invest in the education of Latinos from cradle to career to help level the playing field.

**Lead:** We train Latinos to volunteer on nonprofit boards where they bring invaluable and underrepresented perspectives to the table.

**Connect:** We serve as a hub for Silicon Valley leaders and community to convene and engage with one another on behalf of the Hispanic community.

# GREETING

---

As a kid, when I brought my report card home to my parents that had a bad grade, they asked me, “What are you going to do about it?” They might have been disappointed, perhaps upset even, but they focused me back to hard work and improvement. That was an early lesson learned.

This year’s Latino Report Card has too many bad grades, which have been made worse by the past three years of the pandemic. Our collective reaction must be like my parents’: What are we going to do about it?

The pandemic showed that our Latino community has seriously slipped in the wrong direction in the realms of education and housing, especially for our younger children. Fewer kids are achieving grade level proficiency in reading and math compared to five years ago, and more families are spending way too much on unaffordable housing. Latinos are far disproportionately represented among our unhoused communities, a marked increase over the past five years.

It’s not all bad news, and we show progress in some areas. Latino household incomes are higher, though housing costs are growing higher still and too many families have to cut essentials such as health care and food to make ends meet. More Latino high school students are graduating, and more are college-ready than five years ago. We found that teen pregnancies are declining, which helps to keep young people in school, but they’re still higher than in the rest of our community. Environmental awareness and engagement among Latinos remains strong.

Because of the pandemic, however, we found disproportionate impacts on Latino households in terms of higher rates of illness, levels of stress, and social isolation compared to the overall population. This is not a surprise, since more Latinos are in the service and construction industries and could not work from home, and multigenerational households have been more at risk of spreading Covid.

This year’s Report Card is rich with data that exposes our challenges, but it also identifies specific opportunities to rise to those challenges.

I have always maintained that the long-term success and health of Silicon Valley depends on the health and success of our Latino community. But we have hard work ahead of us to make improvements. This Report Card is a call to action for every school, every employer, and every city hall to recognize the many problems we have found, develop specific remedies, and commit to long-term change with practical policies and investments that will help our Latino community help itself.

We can’t afford to wait, and we can’t afford inaction. Our next Report Card must show better grades, because we are talking about the quality of the lives of all our children, their families, and our entire community.

**Ron Gonzales**  
President & CEO  
Hispanic Foundation of Silicon Valley

# FOREWORD

---

The deadly virus that ravaged California claiming over one hundred thousand lives, is finally receding. However, the path to a “normal life” remains uncertain for many who suffered economic and social fallout caused by the government’s measures to curb the spread of COVID-19.

This report emphasizes the impact of the pandemic on the Latino community in Silicon Valley and identifies opportunities to enhance their quality of life.

Latinos comprise 27% of Santa Clara County’s population, and 24% of San Mateo County, making them the third-largest ethnic group in the region. Their indispensable role in keeping our cities functioning has made Latinos particularly vulnerable to the pandemic’s adverse effects. Startlingly, as a percentage of the population, the Latinos bore a disproportionate impact from COVID-19. In Santa Clara County, Latinos accounted for 30% of the total COVID-19 deaths, while in San Mateo County, Latinos accounted for 23% of the COVID-19 deaths.

A staggering 70% Latino survey respondents reported testing positive for COVID-19 or having a household member who did, compared to 52% of non-Latino respondents. While 91% of Latinos received at least one dose of the COVID-19 vaccine, official reports indicate that the vaccination rate among Latinos was significantly lower than that of non-Latinos. Furthermore, the pandemic disproportionately affected Latinos’ mental health, resulting in higher rates of social isolation, work stress, and limited mental healthcare access.

Despite constituting 70% of Silicon Valley’s labor force, 72% of Latinos hold low-wage jobs and face glaring underrepresentation in higher-paying positions. Consequently, they have struggled to cope with the pandemic-induced economic downturn, experiencing substantial insecurity. Alarming, 25% of Silicon Valley Latinos reported going without food or healthcare in the past year, a rate significantly higher than in 2018 and double that of non-Latinos.

Adding to their economic challenges is the issue of unaffordable housing. Less than half of Latino households surveyed (47%) own homes in an area synonymous with skyrocketing prices. The remaining 53% rent their primary residences, with nearly 75% spending over half their income on housing expenses. The lack of affordable housing has resulted in overcrowding, longer commutes, and adverse impacts on their physical and mental well-being.

Although the number of Latinos pursuing higher education has increased, it still falls short in closing the existing gap in college readiness and overall educational attainment compared to non-Latinos. The pandemic further disrupted their educational opportunities, with more than half of Latino survey respondents facing obstacles in accessing online classes during school closures. Consequently, 3rd-grade reading and 8th-grade math proficiency levels plummeted in Santa Clara and San Mateo counties.

Nevertheless, Latinos demonstrate resilience in the face of adversity. Encouragingly, they are becoming more conscious of issues affecting their quality of life, such as climate change, air and water quality, and recreational spaces. Political participation among Latinos has also surged since 2018, presenting an opportunity to effect local public policy.

We now have a crucial moment to reimagine a more equitable and inclusive region. Achieving this requires ensuring Latinos' right to accessible, high-quality, and affordable healthcare and prioritizing discussions on mental health within the community. Lawmakers and advocates must think innovatively to address the housing crisis; they can, for example, be more amicable in allowing community and cooperative home ownership models and community land trust options.

Forty percent of Silicon Valley's Latinos are millennials, poised to shape the future of a region that remains a global economic powerhouse. Swift action is needed to close the academic achievement gap by funding initiatives that support Latino student success.

Additionally, companies must reevaluate their hiring policies to identify and rectify any unintended biases preventing Latinos from accessing higher-paying jobs.

**Together, we can rebuild a better, stronger Silicon Valley.**

# OVERVIEW

**This report offers a portrait of Latinos in Silicon Valley and represents the third iteration of the original Silicon Valley Report Card, published in 2011, and updated in 2018.**

Various data sources are woven together to show how Silicon Valley Latinos are faring across the following quality of life domains: Education, Health, Financial Stability, Housing, and Environmental Sustainability. A data matrix is utilized to assign grades to each source indicator in order to reflect both the well-being of the Latino community in these areas, and perhaps more importantly, how effectively communities and systems support Latinos in achieving their full potential.

This report presents trend data across each domain for Silicon Valley Latinos (as compared to non-Latinos in the region where possible). In addition to secondary data sources, this report features a mixed-methods primary survey data and highlighted indicators to show the impact of COVID-19 on Silicon Valley Latinos. While the most up-to-date data were used for this report, some indicators have not been updated because of the COVID-19 pandemic that suspended regular data collection. This report concludes with a detailed methodology section which also offers a description of the grading process, and finally a dashboard of grades across all domains and indicators.

Many terms are used in Silicon Valley to describe identity such as Hispanic, Latino, Latina, Latinx, and Latine. For this report, we have chosen to continue to use the terms Latino/a and non-Latino/a as in previous Latino Report Cards. We acknowledge that this is not perfect, that language evolves, and that this may change in the future. In addition, when sharing secondary data, we use the more accurate and inclusive category label, “Another Race/Ethnicity” instead of “Other”.

# 2023 HIGHLIGHTS

Much like in school, the grades in this report offer a high-level snapshot of performance, highlighting where progress has been made and lost, and where opportunities to affect change exist.

## DEMOGRAPHICS

### RACE/ETHNICITY

SILICON VALLEY POPULATION BY RACE/ETHNICITY, 2021 (TOP 3)

Latinos represent the third largest racial/ethnic group in Silicon Valley.

### AGE

Latinos under the age of 25 continue to make up a greater percentage of the population than their non-Latino peers (39% and 26%, respectively).

By 2060, the number of Silicon Valley Latinos is projected to grow to over 900,000; Latinos will remain the third largest racial/ethnic group in the region.

## EDUCATION

OVERALL GRADE

**Progress in education remains incremental for Latino students in Silicon Valley.** While Latino students show some gains, these gains have not been enough to close the achievement gap between Latinos and non-Latinos.

### LATINO MATH & READING PROFICIENCY

Reading proficiency for 3rd grade Latino students and math proficiency for 8th grade Latino students in Silicon Valley saw across the board decreases.

#### 3RD GRADE LANGUAGE ARTS/LITERACY

SANTA CLARA COUNTY: 2016-17 (31%) ↓ 2021-22 (29%)

SAN MATEO COUNTY: 2016-17 (31%) ↓ 2021-22 (27%)

#### 8TH GRADE MATHEMATICS

SANTA CLARA COUNTY: 2016-17 (24%) ↓ 2021-22 (17%)

SAN MATEO COUNTY: 2016-17 (26%) ↓ 2021-22 (19%)

### COLLEGE READINESS

The percentage of Latino high school graduates in Silicon Valley who completed the coursework necessary to attend a state college or university increased from 2018-19 but was still well below non-Latino students.

### EDUCATIONAL ATTAINMENT

Just under a quarter of Latinos possess a bachelor's, graduate or professional degree, compared to nearly two-thirds of non-Latinos in Silicon Valley.

### IMPACT OF COVID-19 ON EDUCATION ACCESS

Over half of Latino survey respondents who are parents reported technology as a barrier to their child(ren)'s participation in school when schools were closed because of the COVID-19 pandemic, compared to just over a third of non-Latino survey respondents.

**The health of Latinos in Silicon Valley continues to show both progress and setbacks.** Nearly half of Latino survey respondents reported feeling that their race and/or ethnicity has impacted the quality of health care they have received in the county where they live.

## COVID-19 VACCINE

When asked if they had received at least one dose of a COVID-19 vaccine, Latino and non-Latino survey respondents indicated similar percentages, 91% and 89%, respectively.

## RACE/ETHNICITY AND HEALTH

Nearly half (49%) of Latino survey respondents reported feeling that their race and/or ethnicity has impacted the quality of health care they have received in the county where they live.

## IMPACT OF COVID-19 ON HEALTH AND LIVELIHOOD

Over half of Latino survey respondents reported experiencing social isolation and stress associated with work as a result of the COVID-19 pandemic, notably higher than non-Latinos.

## MENTAL HEALTH

Three quarters of Latino survey respondents reported that their mental health was not good for at least one day in the last month, notably higher than non-Latino survey respondents.

Fewer Latino survey respondents reported being able to receive the mental health supports they needed in the past year when compared to non-Latinos surveyed.

Latinos

Non-Latinos

Latinos

Non-Latinos

# FINANCIAL STABILITY

**The picture of financial stability for Latinos in Silicon Valley is varied.** While median household incomes for Latinos continue to increase, and Latinos have a higher labor force participation, they continue to suffer economic hardship at a higher rate than non-Latinos.

## LABOR FORCE PARTICIPATION

Nearly three-quarters (70%) of Silicon Valley Latinos were participating in the labor force in 2021.

## OCCUPATION AND INDUSTRY

Just over one-quarter (28%) of Latinos in Silicon Valley reported occupations in management, business, science, and arts, well below non-Latinos.

Latinos  
Non-Latinos

## HOUSEHOLD INCOME DISTRIBUTION

Latino households in Silicon Valley earning \$100,000 or more rose by 35% from 2016\* to 2021.

LATINO HOUSEHOLDS IN SILICON VALLEY EARNING \$100K OR MORE

The number of households earning \$15,000 or less decreased by 1%.

LATINO HOUSEHOLDS IN SILICON VALLEY EARNING \$15K OR LESS

## ECONOMIC HARDSHIP

Rates of Latino survey respondents having to go without food, health care or housing in the past year increased since 2018 and were at least double the rates for non-Latinos surveyed.

\*United States Census Bureau. (2023). 2016 American Community Survey 1-year estimates.

\*Grading calculations were completed in accordance with the standard rounding convention: when the digit is less than five the value is rounded down, and when the digit is five or higher, the value is rounded up. Grades with the asterisk symbol (\*) have been rounded up.

# HOUSING

OVERALL GRADE

**Challenges in housing for Latinos in Silicon Valley continue to persist.** Some of these challenges include persistent high cost for housing, limited home ownership, and increases in homelessness. Many of these challenges were exacerbated by the COVID-19 pandemic.

## HOMEOWNERSHIP

Under half of Latino survey respondents in Silicon Valley reported owning their own home compared to two-thirds of non-Latinos.

**47%** % of Latino Homeowners  
**66%** % of Non-Latino Homeowners

## HOUSING AFFORDABILITY

Nearly three quarters of Latino survey respondents reported spending 30% or more of their household income on housing costs, well below non-Latinos.

## HOMELESSNESS

The population of Latinos experiencing homelessness in Silicon Valley continues to grow, increasing substantially in both Santa Clara and San Mateo counties since 2013.

## IMPACT OF COVID-19 ON HOUSING

Nearly twice as many Latino survey respondents in the Silicon Valley reported their housing situation being impacted by the COVID-19 pandemic.

HAS THE COVID-19 PANDEMIC NEGATIVELY IMPACTED YOUR HOUSING SITUATION?

BECAUSE OF THE IMPACT OF THE COST OF HOUSING, HAVE YOU EXPERIENCED LIVING IN A HOUSING UNIT WITHOUT ADEQUATE PLUMBING, HEAT OR ELECTRICITY?

# ENVIRONMENTAL SUSTAINABILITY

OVERALL GRADE

**Although there were some downward shifts in environmentally sustainable activities, concern about the environment remains high for Latinos in Silicon Valley.** Despite reported decreases in recycling and energy conservation at home, Latinos in the region continued to express concerns about environmental issues including climate change and global warming.

## POPULATION WITH ASTHMA

Rates of asthma among Latino adults in Silicon Valley dropped to the rate of non-Latinos in 2021.

## LATINO PRO-ENVIRONMENTAL BEHAVIORS AND ATTITUDES

The percentage of Latino survey respondents reporting always or frequently recycling and conserving energy at home dropped between 2018 and 2023.

More than half of Latino survey respondents were very concerned about climate change and global warming in 2023.

<sup>^</sup>Homelessness data for 2018 and 2023 combines homelessness and family homelessness data.

# DEMOGRAPHICS

Despite slowing growth rates, the United States Latino population continues to increase, reaching a record 60.6 million persons in 2019, accounting for approximately one-fifth of the national population.<sup>1</sup>

In 2021, the 648,365 Latinos residing in Silicon Valley accounted for 25% of the overall population of the region, the third largest racial or ethnic group in Silicon Valley after Asian (37%) and White (30%).<sup>2</sup> The number of Latinos in Silicon Valley is projected to rise to over 900,000 by 2060, remaining the third largest racial or ethnic group in the region.<sup>3</sup>

Many terms are used by people who are of Hispanic or Latino origin or descent to describe their identity such as Hispanic, Latina, Latino, Latinx, and Latine. Most (67%) Latino survey respondents preferred to identify themselves as Hispanic. Over one-third (34%) identified as Latina or Latino, 4% as Latinx, 2% as Latine, and 5% identified with another term not listed in the survey.

THE TERMS HISPANIC, LATINA/O, LATINX AND LATINE ARE ALL USED TO DESCRIBE PEOPLE WHO ARE OF HISPANIC OR LATINO ORIGIN OR DESCENT. WHICH OF THESE TERMS DO YOU PREFER TO DESCRIBE YOURSELF?

## LATINOS AS PERCENTAGE OF TOTAL POPULATION

	2020	2030	2040	2050	2060	2020-60 NET CHANGE
Silicon Valley	27%	28%	28%	28%	28%	+1
Santa Clara County	27%	28%	28%	28%	28%	+1
San Mateo County	26%	27%	28%	28%	29%	+3

Source: California Department of Finance. (2023). Population Projections by Total Hispanic and Non-Hispanic Race, California Counties, 2020-2060.

Latinos under the age of 35 continue to make up a greater percentage of the population than their non-Latino peers (54% and 41%, respectively). In 2021, 21% of Latinos in Silicon Valley were ages 5 to 17, 11% were ages 18 to 24, and 15% were ages 25 to 34.

The overall Latina birth rate in Silicon Valley decreased from 12.3 births per 1,000 individuals in 2017 to 11.4 births per 1,000 individuals in 2021. This downward trend mirrors the birth rate of Latinas across the state and the birth rate of non-Latinas in Silicon Valley.

In 2021, 76% of Latino households in Silicon Valley identified as family households. The proportion of female-headed households in the Silicon Valley Latino community (20%) was double that of the overall Silicon Valley population (10%).

In 2021, the average household size was 3.4 persons for Latinos and 2.8 persons for all households in Silicon Valley. This difference was similar for Latinos throughout California, in which the average household size was 3.6 persons, compared to 2.9 persons for all households in California.<sup>4</sup>

<sup>4</sup>United States Census Bureau. (2023). 2021 American Community Survey 1-year estimates.

# IMMIGRATION

More Latino than non-Latino survey respondents indicated that they, at least one parent, or at least one grandparent were born outside of the United States. Fifty-nine percent (59%) of Latino respondents indicated that at least one parent was born outside of the United States compared to 26% of non-Latino respondents.

## SURVEY RESPONDENTS ANSWERING “YES” TO THE FOLLOWING QUESTIONS

Source: Applied Survey Research. (2023). Silicon Valley Latino Report Card, Telephone and Online Survey.  
 Note: The 2018 Latino Report Card survey asked respondents if they considered themselves to be first, second or third generation immigrants. Due to differing definitions of generations, the 2023 survey asked where the respondents and at least one parent and grandparent were born.

In 2021, 65% of Latinos in Silicon Valley reported being born in the United States compared to 58% of non-Latinos. Over one-third (37%) of Latinos in Silicon Valley were United States citizens, notably lower than non-Latinos (60%).

From 2016 to 2021, the percentage of Latinos from the country of Mexico slightly decreased from 78% to 75%, while the percentage of Latinos from the region of Central America slightly increased from 10% to 13%. Latinos from Mexico and Latinos from Central America remained the two largest origin groups in 2021.

### PLACE OF ORIGIN OF LATINOS IN SILICON VALLEY

Place of origin	Number of persons		% of Silicon Valley Latino population	
	2016	2021	2016	2021
Mexico	536,600	487,189	78%	75%
Central America	71,138	81,098	10%	13%
Another place of origin, including Spain	29,239	34,462	4%	5%
South America	29,233	28,038	4%	4%
Puerto Rico	15,299	11,571	2%	2%
Cuba	4,200	3,709	1%	1%
Dominican Republic	940	2,298	<1%	<1%

Source: United States Census Bureau. (2023). 2016 and 2021 American Community Survey 1-year estimates.  
 Note: Percentages do not add up to 100% due to rounding.

Spanish is the second most commonly spoken language in Silicon Valley, after English. Over one-third (38%) of Spanish-speakers in Silicon Valley reported speaking English less than “very well” in 2021.<sup>5</sup>

Concerns regarding immigration status have impacts on numerous facets of daily life. From 2018 to 2023, Latino survey respondents reporting that they had concerns about their family’s legal status rose from 18% to 26%. A majority (54%) of Latino survey respondents in 2023 reported those concerns prevented them from using social services or public benefits. Obtaining health care (48%), health insurance (46%), and getting or keeping a job (42%) were also top concerns for Latino survey respondents in 2023.

<sup>5</sup>United States Census Bureau. (2023). 2021 American Community Survey 1-year estimates.

## HAVE CONCERNS ABOUT YOUR OR YOUR FAMILY'S LEGAL STATUS EVER PREVENTED YOU FROM ANY OF THE FOLLOWING?

2018: Latinos N=55 respondents offering 195 responses  
 2023: Latinos N=98 respondents offering 275 responses  
 Source: Applied Survey Research. (2018 & 2023). Silicon Valley Latino Report Card, Telephone and Online Survey.  
 Note: Multiple response question. Percentages do not add up to 100%.

Latino and non-Latino survey respondents rated employment as the most important issue facing the Silicon Valley Latino community, a notable increase from 2018. This was followed by health and immigration for Latino respondents (18% respectively) and education and immigration for non-Latino respondents (22% respectively). In 2023, lower percentages of Latino and non-Latino respondents rated immigration as a top issue compared to 2018. Meanwhile, health rose six-fold among Latino respondents and three-fold among non-Latino respondents.

# WHAT DO YOU THINK THE MOST IMPORTANT ISSUE FACING THE HISPANIC/LATIN(A)(O)(X)(E) COMMUNITY IN SILICON VALLEY IS RIGHT NOW?

2018: Latinos N=367; Non-Latinos N=330  
 2023: Latinos N=371; Non-Latinos N=320  
 Source: Applied Survey Research. (2018 & 2023). Silicon Valley Latino Report Card, Telephone and Online Survey.  
 Note: Percentages do not add up to 100% due to rounding.

# CIVIC PARTICIPATION

Survey respondents were also asked about their participation in civic activities, either online or in-person, in the last year. Latinos and non-Latinos reported participating in the same top three activities – voting, signing a petition, and meeting with, emailing, calling, or sending a letter to a local politician. More than half (55%) of Latino respondents reported having voted, notably lower than 81% of non-Latino respondents. Although 10% of Latino respondents and 4% of non-Latino respondents reported not having participated in any of the civic activities listed in the survey, these were notable decreases from 25% in 2018. Compared to 2018, higher percentages of Latino respondents reported participating in civic activities in 2023, with the biggest differences found in contacting a local politician from 20% in 2018 to 29% in 2023 and joining a neighborhood group or association from 15% in 2018 to 22% in 2023.

## IN THE PAST 12 MONTHS, HAVE YOU DONE ANY OF THE FOLLOWING CIVIC PARTICIPATION ACTIVITIES ONLINE OR IN-PERSON?

2018: Latinos N=379 respondents offering 749 responses; Non-Latinos N=374 respondents offering 784 responses  
 2023: Latinos N=344 respondents offering 703 responses; Non-Latinos N=351 respondents offering 790 responses  
 Source: Applied Survey Research. (2018 & 2023). Silicon Valley Latino Report Card, Telephone and Online Survey.  
 Note: Multiple response question. Percentages do not add up to 100%.

# EDUCATION

Education is a strong predictor of quality of life. While Latino students in Silicon Valley made gains on several education indicators in the last five years, reading proficiency for 3rd grade Latino students and math proficiency for 8th grade Latino students in Silicon Valley saw across the board decreases. High school non-completion rates among Latino students, on the other hand, have decreased across the region. Latino students are also increasingly more college-ready, as demonstrated by the increase of Latino students completing the courses necessary for transfer to the state's public university systems.

While Latino students made gains on most indicators described above, these gains have not been enough to close the achievement gap between Latinos and non-Latinos. Indeed, the markedly different trajectories between Latinos and non-Latinos result in a picture of educational attainment that is askew: 27% of Latinos in Silicon Valley have less than a high school diploma, compared to 6% of non-Latinos; and 22% of Latinos have a bachelor's degree or higher, compared to 63% of non-Latinos. In order to correct these imbalances in educational attainment for students in Silicon Valley, the community will need new strategies to improve education pathways for Latino children.

RACE/ETHNICITY AND EDUCATION

CHAPTER SPONSORS

“Exposing Latino students to STEM fields early on is critical for innovation and progress. By providing the resources for these students to succeed, they will have the opportunity to excel in fields that will drive economic growth and technological advancement while promoting diversity and representation.”

Mary Ann Dewan, PhD

Santa Clara County Superintendent of Schools  
Santa Clara County Office of Education

# EARLY CHILDHOOD EDUCATION | B

Research shows that students who participate in pre-K programs are better prepared for kindergarten and demonstrate improvements in literacy and numeracy, as well as more modest gains in social-emotional and self-regulatory behaviors. This effect is amplified in the case of economically disadvantaged students and dual language learners.<sup>6</sup>

School attendance among Latino children ages three and four in Silicon Valley slightly increased from 44% in 2016 to 45% in 2021, although consistently at lower percentages than non-Latinos in the region. In 2021, 45% of Latino children ages three and four were attending school compared to 51% of non-Latinos.

## 3 AND 4 YEAR OLDS WHO ATTEND SCHOOL, BY COUNTY

The average annual childcare costs for a preschooler in Silicon Valley is more than double the average cost of one year at a four-year public university in California. These costs are prohibitive, particularly when compared with the average median household income of approximately \$92,000 for Latinos in Santa Clara County and San Mateo County.

**AVERAGE ANNUAL COST OF A CHILD CARE CENTER,

Note: Annual tuition cost for a public university in California reflects average in-state tuition at a four-year university.

# 3RD GRADE READING PROFICIENCY | F

Reading proficiency among students is linked to enhanced school engagement as well as high school graduation and college attendance. In contrast, those students with more limited reading abilities tend to struggle with math and science, among other subjects, making it more difficult to make up this deficiency over time.<sup>7</sup>

The percentage of Latino students in Santa Clara County meeting or exceeding 3rd grade language arts/literacy standards slightly decreased from 31% in the 2016-2017 school year to 29% in the 2021-2022 school year. San Mateo County also experienced a decrease from 31% in 2016-2017 to 27% during this time. In 2021-2022, a majority of all students in Santa Clara County (57%) and San Mateo County (55%) met or exceeded these standards.

## 3RD GRADE STUDENTS WHO MET OR EXCEEDED ENGLISH LANGUAGE ARTS/LITERACY STANDARDS, BY COUNTY

# 8TH GRADE MATH PROFICIENCY | F

Nationwide, increasing emphasis is placed on children’s achievement in mathematics, science, technology, and engineering, recognizing the importance of these fields in the country’s future and ability to innovate.<sup>8</sup>

The percentage of Latino students in Santa Clara County meeting or exceeding 8th grade mathematics standards decreased from 24% in the 2016-2017 school year to 17% in the 2021-2022 school year. San Mateo County also experienced a decrease from 26% in 2016-2017 to 19% in 2021-2022. In 2021-2022, nearly half of all students in Santa Clara County (48%) and San Mateo County (45%) met or exceeded these standards.

## 8TH GRADE STUDENTS WHO MET OR EXCEEDED MATHEMATICS STANDARDS, BY COUNTY

# HIGH SCHOOL NON-COMPLETION | D\*

While Latinos have made important strides in education in recent decades, they still fall behind in high school completion and other academic measures when compared to other races and ethnicities.<sup>9</sup> The high school non-completion rate among Latinos in California fell to a new low of 9% in the 2021-2022 school year, extending a decades-long decline.<sup>10</sup>

From 2017 to 2022, the cohort outcome high school non-completion rate<sup>^</sup> of Latino students in Santa Clara County declined from 18% to 14%, while the non-completion rate over this same period for Latino students in San Mateo County remained steady at 9%. Santa Clara County’s non-completion rate for Latino students (14%) is notably higher than the 9% non-completion rate reported for Latino students in San Mateo County and the 9% non-completion rate reported for Latino students across California.

## COHORT<sup>^</sup> OUTCOME HIGH SCHOOL NON-COMPLETION RATES, BY COUNTY

### SANTA CLARA COUNTY

### SAN MATEO COUNTY

Source: California Department of Education. (2023). Educational Demographics Office, 2017-2022.

<sup>^</sup>The cohort is based on the number of students who enter 9th grade for the first time adjusted by adding into the cohort any student who transfers in later during the next three years and subtracting any student from the cohort who transfers out. The non-completion rate includes those cohort students who withdrew from a regular high school without receiving a regular high school diploma.

# COLLEGE READINESS | D

Historically underrepresented students including Latinos face significant barriers with respect to college readiness, access to college, and college completion, that lower their odds of obtaining college degrees relative to their wealthier, well-represented peers.<sup>11</sup>

In the 2021-2022 school year, 42% of Latino high school graduates in Silicon Valley completed the coursework necessary to attend a state college or university, on par with 43% of Latino high school graduates statewide. Meanwhile, 77% of non-Latino high school graduates in Silicon Valley completed the necessary coursework.

# EDUCATIONAL ATTAINMENT | B\*

Higher educational attainment generally leads to more employment opportunities, higher earning potential, and better health.<sup>12</sup> In California, a growing share of Latinos are obtaining college degrees. In 2021, 16% of Latinos ages 25 and older reported earning a bachelor’s degree or higher – up from 12% in 2016.<sup>13</sup>

The level of educational attainment among Latinos in Silicon Valley (73%) was notably lower than non-Latinos in Silicon Valley (94%) in 2021. Over one-quarter (27%) of Latinos ages 25 and older in Silicon Valley reported earning less than a high school diploma, compared to 6% of non-Latinos in the region.

# RACE/ETHNICITY AND EDUCATION | F

The financing system of public schools in the United States, including relying heavily on local property taxes, is inadequate and inequitable. According to the most recent report from the Public Policy Institute of California (PPIC), “on average, California public K-12 schools receive most of their funding from the state and some from the federal government, with local revenue through property taxes making up about 30 percent of the revenue.”<sup>14</sup> Low income students and communities of color consistently receive fewer resources to meet their needs. The practice of underinvesting in education results in schools being unable to offer up-to-date technologies and curricula, robust extracurricular activities and hire and retain the educators needed to provide a high quality education, with added consequences for students.<sup>15</sup>

Nearly half (48%) of Latino survey respondents who are parents reported feeling that their race and/or ethnicity has impacted the quality of education their child(ren) has received in the county where they live, notably higher than 26% of non-Latino survey respondents.

<sup>14</sup>How funding K-12 via property taxes fuels social inequality. Arredondo, V. (October 5, 2022). Retrieved from <https://californialocal.com/localnews/santa-clara/ca/article/show/12796-property-taxes-and-k-12-education/> on April 26, 2023.

# IMPACT OF COVID-19 ON EDUCATION ACCESS

Over half (52%) of Latino survey respondents who are parents reported technology as a barrier to their child(ren)’s participation in school when schools were closed because of the COVID-19 pandemic, compared to 36% of non-Latino survey respondents.

Parents were also asked if their ability to use technology changed. Forty-nine percent (49%) of Latino survey respondents indicated that their ability to use technology “improved”, higher than 41% of non-Latino survey respondents.

# HEALTH

Latinos in Silicon Valley are demonstrating progress in some indicators of health, while indicating other areas are still in need of improvement. For instance, the percentage of Latino students in 7th grade receiving favorable physical fitness scores has decreased by nearly 10% in recent years. Accordingly, Latino adults in Silicon Valley are more likely to have Body Mass Index (BMI) levels deemed high risk by the Centers for Disease Control and Prevention than non-Latinos — nearly half (49%) of Latino adults in 2021 were considered overweight or obese.

Fewer Latina teens are becoming young mothers; the teen birth rate for Latinas, while much higher than that for non-Latinas, continues to drop steadily. The infant mortality rate for Latinos has steadily decreased in Santa Clara County, while slightly increasing in San Mateo County between 2012 and 2016.

“Access to healthcare, quality of care, and healthy choices in their environment are critical factors impacting Latino families’ health. It is necessary to address the social determinants of health such as food insecurity, housing, education, and fight against diabetes, obesity, and the disparities among communities of color.”

**Dr. Efren Rosas**  
Physician in Chief  
Kaiser Permanente

# HEALTH INSURANCE | B

A lack of health insurance coverage is a significant barrier to accessing health services. Families and individuals without health insurance coverage often have unmet health needs, receive fewer preventive services, suffer delays in receiving appropriate care, and experience more hospitalizations.<sup>16</sup>

A comparison of health insurance rates by county shows that while overall insured rates for Latinos are increasing, Latino adults in Santa Clara County had lower levels of health insurance between 2017 and 2021 than those in San Mateo County.

## TEEN BIRTHS | C

Rates of birth among Latina teens in both Santa Clara and San Mateo counties decreased between 2016 and 2020. A similar trend was observed among all teen mothers across both counties during the same time period, although the birth rates for these teens were notably lower than those among Latinas.

## ORAL HEALTH | D

Children with healthy teeth can chew food easily, learn to speak clearly, and smile with confidence. Regular checkups help prevent cavities and tooth decay. Tooth decay is the most common chronic disease among children in the United States. The Centers for Disease Control and Prevention (CDC) reports that more than 40% of children have tooth decay by the time they reach kindergarten.<sup>17</sup>

Results from the 2021 California Health Interview Survey show that seven in ten (71%) Latino children ages 3 to 11 in Silicon Valley indicated visiting the dentist within the last six months. This is on par with non-Latino children in Silicon Valley (71%) and Latino children statewide (74%).

### TIME SINCE LAST DENTAL VISIT OF CHILDREN (AGE 3-11), 2021

# MENTAL HEALTH | C

Seventy-five percent (75%) of Latino survey respondents reported that their mental health was not good for at least one day in the last month, notably higher than 58% of non-Latino survey respondents. When asked if they received the mental health treatment, counseling, or other help they needed in the last year, 66% of Latino survey respondents indicated they were able to receive the mental health care they needed, compared to 82% of non-Latino survey respondents.

# PHYSICAL ACTIVITY | F

Regular physical activity can improve overall health and quality of life regardless of age or the presence of a chronic disease or disability. Among adults, physical activity can lower the risk of early death, stroke, type 2 diabetes, breast and colon cancers, and depression. Among children and adolescents, physical activity can improve bone health and muscle fitness, decrease levels of body fat, and reduce symptoms of depression.<sup>18</sup> Other positive outcomes among children and adolescents include improved performance at school and a decreased likelihood of risky behaviors.<sup>19</sup>

The percentage of 7th grade Latino students in Silicon Valley with favorable fitness scores, defined as meeting five of the six criteria for the Healthy Fitness Zone by the California Department of Education, decreased from 47% in the 2014-2015 school year to 39% in the 2018-2019 school year, markedly below those of non-Latinos in Silicon Valley during the same time period.

# OBESITY | D

Being overweight or obese contributes to numerous health conditions that limit the quality and length of life. Obesity-related conditions include heart disease, stroke, type 2 diabetes, and certain types of cancer, some of the leading causes of preventable death.<sup>20</sup> Nationally, the growth in adult rates of obesity has slowed over time, but still remain far too high. Nineteen states report adult obesity rates over 35%, putting millions of people at increased risk for heart disease, cancer, and diabetes. Rates are even higher among Latino and Black/African American families, as well as among families living in poverty.<sup>21</sup> In 2019, the estimated annual medical cost of obesity in the United States was \$173 billion.<sup>22</sup>

Nearly half (49%) of Latino adults in Silicon Valley had Body Mass Index (BMI) levels deemed high risk. Meanwhile, over one-quarter (26%) of non-Latino adults in Silicon Valley reported a high-risk BMI level. Rates of high-risk BMI levels among Latino adults in Silicon Valley slightly decreased from 52% to 49% between 2017 and 2021. A similar trend was observed among non-Latino adults in Silicon Valley. Rates of high-risk BMI levels increased in San Mateo County, while rates declined in Santa Clara County between 2017 and 2021.

<sup>22</sup>Centers for Disease Control and Prevention. (2022). Adult Obesity. Retrieved from <https://www.cdc.gov/obesity/data/adult.html> on March 1, 2023.

Childhood obesity is a serious problem in the United States, putting kids at increasing risk of poor health. National data show that approximately 20% of youth ages two through 19 have obesity. Obesity rates are declining among 2- to 5-year-olds, stable among 6- to 11-year-olds, and increasing among 12- to 19-year-olds.<sup>23</sup> While the national childhood obesity rate has leveled off, troubling racial and ethnic disparities persist among communities of color. Rates are higher among Latino and Black/African American children — and the rates are higher beginning at earlier ages and increasing more quickly.<sup>24</sup> Inequities in access to healthcare, the quality of care received, and opportunities to make healthy choices where people live, learn, work, and play all contribute to higher rates of obesity among Latino adults and children. Higher rates of hunger and food insecurity, limited access to safe places to be physically active, and targeted marketing of less nutritious foods in Latino communities also contribute to higher rates of obesity.<sup>25</sup>

According to the 2021 California Health Interview Survey, a higher percentage of Latino children in Silicon Valley were overweight for their age compared to non-Latino children in the same region. Between 2017 and 2021, Latino children in Silicon Valley indicated lower rates of being overweight than Latino children across the state.

# NUTRITION | B\*

Healthy diets, together with achievement and maintenance of healthy body weights, reduce the risk of chronic diseases and promote overall health.<sup>26</sup> Efforts to change diet and weight should address individual behaviors, as well as the policies and environments that support these behaviors. For example, access to healthy and affordable food in retail and food service settings allows individuals to make healthier food choices. When healthy food choices are not readily available, people may settle for foods that are higher in calories and lower in nutritional value.<sup>27</sup>

In 2018, over three-quarters (78%) of Latino adults in Silicon Valley reported they were always able to find fresh fruits and vegetables in their neighborhood. Between 2014 and 2018, this percentage was higher when compared to Latinos across California (74%), but lower when compared to non-Latinos in Silicon Valley (89%).

## ADULTS (AGES 18 AND OLDER) WHO WERE ALWAYS ABLE TO FIND FRESH FRUITS AND VEGETABLES IN NEIGHBORHOOD

# DIABETES | D

Diabetes is the seventh leading cause of death in the United States, and is the number one cause of kidney failure, lower-limb amputations, and adult-onset blindness. In the last 20 years, the number of adults diagnosed with diabetes has more than doubled as the American population has aged and become increasingly overweight or obese.<sup>28</sup> In addition to these human costs, the estimated total financial cost of diabetes in the United States was \$327 billion in 2022, which includes the total medical costs and lost work and wages for people with diagnosed diabetes.<sup>29</sup>

In 2021, 10% of Latino adults in Silicon Valley reported a diabetes diagnoses, a decrease since 2017. Since 2019, the percentage of Silicon Valley Latino adults living with diabetes has been higher than that of Silicon Valley non-Latino adults.

## SMOKING | F

Smoking is the leading cause of preventable death, leading to disease and disability, and harming nearly every organ of the body. Smoking also costs the United States billions of dollars each year.<sup>30</sup> Latino adults generally indicate lower prevalence of cigarette smoking and other tobacco use compared to other racial and ethnic groups. However, prevalence varies among sub-groups within the Latino population.<sup>31</sup>

Latino adults (ages 18 and older) in Silicon Valley who identified as current smokers decreased from 12% in 2017 to 7% in 2021.

# MORTALITY | B

Infant mortality is the death of an infant before their first birthday. The infant mortality rate is the number of infant deaths for every 1,000 live births.<sup>32</sup>

Latinos in Santa Clara County and San Mateo County experienced lower rates of infant mortality in 2017-2019 than all infants in each respective county. Latino infant mortality rates decreased from 3.8 to 2.8 per 1,000 births in Santa Clara County between 2013 and 2019, while slightly increasing in San Mateo County from 2.3 to 2.5 per 1,000 births during the same time period.

### YEARS OF POTENTIAL LIFE LOSS (YPLL)

is defined as the average time a person would have lived had they not died prematurely.

YPLL focuses attention on deaths that might have been prevented, and emphasizes deaths of younger persons, whereas data that include all mortality are dominated by deaths of the elderly.

The most recent estimates using data from 2018 to 2020 show that Latinos in Santa Clara County and San Mateo County lost 4,900 and 3,900 years of life per 100,000 individuals, respectively, due to premature death. Overall, individuals in California as a whole lost 5,700 years of life per 100,000 individuals.

<sup>32</sup>California Department of Public Health. (2023). Infant Mortality. Retrieved from <https://www.cdph.ca.gov/programs/cfh/dmcah/surveillance/pages/infant-mortality.aspx> on March 1, 2023.

## RACE/ETHNICITY AND HEALTH | F

According to a 2022 article by The Commonwealth Fund, “Racial and ethnic discrimination has a significant impact on the health of people of color, affecting mental health and contributing to high blood pressure, negative health behaviors, and early aging... In health care settings, experiences of discrimination can include providers dismissing a patient’s symptoms or health concerns, offering different treatment based on a patient’s type of insurance, or not providing care in a patient’s preferred language.”<sup>33</sup>

Nearly half (49%) of Latino survey respondents reported feeling that their race and/or ethnicity has impacted the quality of health care they have received in the county where they live.

## IMPACT OF COVID-19 ON HEALTH AND LIVELIHOOD

Sixty-nine percent (69%) of Latino survey respondents reported that they or someone in their household had ever tested positive for COVID-19, compared to 52% of non-Latino survey respondents. When asked if they had received at least one dose of a COVID-19 vaccine, Latino and non-Latino survey respondents indicated similar percentages, 91% and 89%, respectively.

Survey respondents were also asked about the impact of COVID-19 on their livelihoods. Latino and non-Latinos reported the same top three impacts – increased household expenses, social isolation, and stress associated with work – although Latino respondents at higher percentages.

Source: Santa Clara County Public Health Department. (2023). COVID-19 Vaccinations Dashboard. Retrieved from <https://covid19.sccgov.org/dashboard-vaccinations> on February 26, 2023; San Mateo County Health. (2023). County Data Dashboard. Retrieved from <https://www.smchealth.org/data-dashboard/country-data-dashboard> on February 26, 2023.

Note: The Santa Clara County Public Health Department counts the number of COVID-19 vaccine doses administered by day for people living in Santa Clara County regardless of where they received their vaccine. San Mateo County Health counts the number of COVID-19 vaccine doses administered by day for people living in San Mateo County regardless of where they received their vaccine. The vaccination rates displayed for both counties are capped at 95% to help address potential over-estimates of vaccination coverage. Additionally, the individual group data will not add up to the grand total since both counties use population estimates that may be less than the actual population.

# FINANCIAL STABILITY

Latinos play a significant role in Silicon Valley's economy, boasting a notably higher labor force participation rate than non-Latinos in the region. Latinos are more likely than non-Latinos to work in service, sales and office, natural resources, construction and maintenance, or production, transportation and material moving occupations. Only 2% of Latinos work in computer or math-based occupations, compared to 15% of non-Latinos. Similarly, only 2% of Latinos work in architecture or engineering occupations, compared to 8% of non-Latinos.

Between 2016 and 2021, the rate of unemployment of Latinos in Silicon Valley slightly increased from 5% to 7%, a similar trend among Latinos statewide and non-Latinos in the region. While median household incomes for Latinos continue to increase across Silicon Valley, they are notably lower than all persons in the region. In addition, these incomes are not enough as over half (57%) of Latino households are not economically self-sufficient.

Given that Latinos are the third largest segment of Silicon Valley's population, the local economy needs to harness Latinos' desire to work and their entrepreneurial spirit by providing jobs and wages that enable Latinos to prosper.

\*Grading calculations were completed in accordance with the standard rounding convention: when the digit is less than five the value is rounded down, and when the digit is five or higher, the value is rounded up. Grades with the asterisk symbol (\*) have been rounded up.

“The data reveals that median household income is notably lower for Latino households in Silicon Valley, with increased rates of unmet basic needs. Urgent action is necessary to address economic disparities and to ensure all families have access to the essentials for a dignified life.”

**Brianna Rivera**  
Municipal Credit Analyst  
Wells Fargo

# LABOR FORCE PARTICIPATION | B\*

The labor force participation rate, defined as the percentage of the population age 16 and older who are working or seeking work, slightly decreased from 72% in 2016 to 70% in 2021 among Latinos in Silicon Valley. The Latino labor force participation rate in Silicon Valley has been higher than that of Latinos statewide and of non-Latinos in Silicon Valley. Seventy percent (70%) of Latinos in the Silicon Valley were engaged in the labor force in 2021, compared to 66% of their counterparts statewide and 66% of non-Latinos. The labor force participation rate of Latinos in San Mateo County has been consistently higher than Latinos in Santa Clara County since 2016 except in 2019.

## LABOR FORCE PARTICIPATION RATE

\*Grading calculations were completed in accordance with the standard rounding convention: when the digit is less than five the value is rounded down, and when the digit is five or higher, the value is rounded up. Grades with the asterisk symbol (\*) have been rounded up.

# OCCUPATION AND INDUSTRY | D

Generally, individuals working in stable, rewarding occupations and industries can improve their economic status. In 2021, Latinos in Silicon Valley were represented across occupation types at comparable levels to statewide distributions. Latinos in Silicon Valley accounted for over one-quarter (28%) of management, business, science, and arts occupations, in contrast to 67% of non-Latinos in Silicon Valley in 2021.

## OCCUPATIONS

Source: United States Census Bureau. (2023). 2016 and 2021 American Community Survey 1-year estimates.

In 2021, Latinos in Silicon Valley were working in high-tech occupations in slightly higher percentages than Latinos statewide, although at disproportionately lower rates than non-Latinos.

## POPULATION WORKING IN HIGH-TECH OCCUPATIONS, 2021

Source: United States Census Bureau. (2023). 2021 American Community Survey 1-year estimates.

# UNEMPLOYMENT | B\*

Income, employment status, and overall financial well-being affects one’s ability to acquire resources for healthy living and impacts the overall health of a community. For example, unemployment is associated with higher rates of self-reported poor health, long-term illness, higher incidence of risky health behaviors and increased mortality.

The unemployment rate among Latinos in Silicon Valley slightly rose from 5% in 2016 to 7% in 2021. Similar increases in the unemployment rate were observed among Latinos across California and among non-Latinos in Silicon Valley. In 2021, the overall percentage of unemployment was lower among non-Latinos in Silicon Valley (6%) compared to both Latinos in Silicon Valley (7%) and statewide (9%).

## UNEMPLOYMENT RATE

# MEDIAN HOUSEHOLD INCOME | B

Income is key to building a more stable and prosperous future. In 2021, the median Latino household income was \$89,201 in Santa Clara County, while in San Mateo County the median Latino household income was \$95,259. While both counties have seen a steady increase since 2016, median household income is notably lower for Latinos than all persons.

## MEDIAN HOUSEHOLD INCOME

Source: United States Census Bureau. (2023). 2016-2021 American Community Survey (ACS) 1-year estimates.  
 Note: The US Census Bureau did not release its standard 2020 ACS 1-year estimates because of the impacts of the COVID-19 pandemic.

## MEDIAN HOUSEHOLD INCOME OF LATINOS, BY COUNTY

	2016	2017	2018	2019	2021	2016-21 NET CHANGE
Santa Clara County	\$71,207	\$74,767	\$84,287	\$83,414	\$89,201	+\$17,994
San Mateo County	\$69,141	\$75,435	\$84,160	\$85,031	\$95,259	+\$26,118

Source: United States Census Bureau. (2023). 2016-2021 American Community Survey (ACS) 1-year estimates.  
 Note: The US Census Bureau did not release its standard 2020 ACS 1-year estimates because of the impacts of the COVID-19 pandemic.

In 2021, 5% of Latino households earned less than \$15,000 while 25% earned more than \$150,000. While 5% of all Silicon Valley households made less than \$15,000, nearly half (47%) of all Silicon Valley households made more than \$150,000.

### HOUSEHOLD INCOME DISTRIBUTION, 2021

 Note: Percentages may not add up to 100% due to rounding.

# ECONOMIC SELF-SUFFICIENCY | F

The California Family Economic Self-Sufficiency Standard (Self-Sufficiency Standard) quantifies the costs of basic needs for California’s working families. The Self-Sufficiency Standard provides a measure of the minimum amount of income needed for basic needs such as housing, childcare, food, transportation, healthcare, and taxes. The tool takes into account family composition, ages of children, and geographic differences in costs, however it does not take into account cultural values and practices around financially supporting extended family and “differing beliefs about the organization of family life.”<sup>34</sup>

Over half (57%) of Latino households in Silicon Valley were below the 2018 Self-Sufficiency Standard, nearly twice the rate as all of Silicon Valley (30%). When asked if they had gone without basic needs in the last year, Latino and non-Latino survey respondents reported the same top three basic needs not being met – food, health care, and transportation – although Latino respondents at notably higher percentages. Compared to 2018, higher percentages of Latino and non-Latino respondents in 2023 went without at least one basic need in the last year, with the biggest increases in food from 9% to 26%, health care from 14% to 25% and transportation from 13% to 22% among Latino respondents.

## HOUSEHOLDS BELOW THE SELF-SUFFICIENCY STANDARD, 2018

 Note: Multiple response question. Percentages do not add up to 100%.

## PERSONAL FINANCES | C\*

Latinos and non-Latino survey respondents in 2023 reported similar levels regarding their financial well-being this year over the last (24% and 18%, respectively). This represents a decrease from 2018, when 28% of Latino respondents and 25% of non-Latino respondents indicated they were better off financially that year compared to a year ago. Forty-seven percent (47%) of Latino survey respondents indicated that they think they will be better off financially a year from now, compared to 30% of non-Latino survey respondents. In 2023, when asked how comfortable they are managing their personal finances, 73% of Latino respondents indicated “very” or “somewhat” comfortable, compared to 84% of non-Latino respondents.

### WOULD YOU SAY THAT YOU (AND YOUR FAMILY LIVING WITH YOU) ARE FINANCIALLY BETTER OFF, THE SAME, OR WORSE OFF COMPARED TO A YEAR AGO?

# RACE/ETHNICITY AND EMPLOYMENT | F

According to the National Equity Atlas, “A variety of historical and contemporary factors cause Black, Native American, Latinx, and other workers of color to experience unemployment at much higher rates than White workers.” These drivers of inequity include employer discrimination, racial segregation, disinvestment in schools, transportation barriers, and lack of affordable childcare and housing near job centers.<sup>35</sup>

Forty-five percent (45%) of Latino survey respondents reported feeling that their race and/or ethnicity has impacted their ability to secure employment in the county where they live, notably higher than one-quarter (25%) of non-Latino survey respondents.

 Note: Multiple response question. Percentages do not add up to 100%.

# HOUSING

Latinos in Silicon Valley face consistent challenges with housing and are less likely to be homeowners than non-Latinos. According to the U.S Census Bureau in 2021, 13% of homeowners were Latinos in Silicon Valley, notably lower than 61% of non-Latinos in the region.<sup>36</sup> Affordable housing is beyond reach for many Latinos with high housing burdens, many spending well more than one-third of their income on rent or mortgage costs.

Overcrowded housing conditions, unstable housing situations, and homelessness are the result of many factors, including higher unemployment, lower family incomes, and larger shares of income needed for housing. In 2021, 17% of Latinos lived in overcrowded housing conditions — a proportion much higher than that reported for non-Latinos in Silicon Valley (3%). In Santa Clara County, the percentage of Latinos experiencing homelessness has increased substantially, and Latinos as of 2022 comprise 47% of the overall homeless population. In San Mateo County, the percentage of Latinos experiencing homelessness has more than doubled since 2013.

# HOMEOWNERSHIP | D

Homeownership can offer financial security and stability and is one step towards building generational wealth.

Latino survey respondents in Silicon Valley reported owning their own homes at far lower rates than non-Latinos, 47% and 66%, respectively. Homeownership among Latinos in Santa Clara County remained at 13% from 2016 to 2021, while slightly increasing from 11% to 13% in San Mateo County during the same time period.

Note: The US Census Bureau did not release its standard 2020 ACS 1-year estimates because of the impacts of the COVID-19 pandemic.

# HOUSING AFFORDABILITY | C\*

Spending more than 30% of household income on housing is considered to be a cost burden by the U.S. Department of Housing and Urban Development; 50% or more is considered a severe cost burden. Seven out of 10 Latino survey respondents (73%) reported spending 30% or more of their household income on housing costs, compared to 57% of non-Latino survey respondents.

The Housing Opportunity Index (HOI) for a given area is defined as the share of homes sold in that area that would have been affordable to a family earning the local median income, based on standard mortgage underwriting criteria. The major components of the index are income and housing cost. In 2021, the HOI indicated that less than one-fifth (15%) were affordable to Latino families, on par with 17% of Latinos statewide. The HOI for both Santa Clara and San Mateo counties increased between 2019 and 2021, while decreasing for Latinos statewide during the same time period. In 2022, the overall HOI for the San Jose, Santa Clara and Sunnyvale region increased to 22%, up from 17% in 2018.

## IS THE AMOUNT OF MONEY YOU USE TO PAY FOR HOUSING, EXCLUDING UTILITIES, SUCH AS GAS AND ELECTRICITY...?

\*Grading calculations were completed in accordance with the standard rounding convention: when the digit is less than five the value is rounded down, and when the digit is five or higher, the value is rounded up. Grades with the asterisk symbol (\*) have been rounded up.

## HOUSING OPPORTUNITY INDEX<sup>1</sup> AND MEDIAN HOME SALE PRICE IN SAN JOSE/SANTA CLARA/SUNNYVALE, CA

Source: National Association of Home Builders. (2023). 2018-2022 NAHB - Wells Fargo Housing Opportunity Index, 1st Quarter.  
<sup>1</sup>Housing Opportunity Index: The share of homes sold in a particular area that were affordable to families making the area's median income.  
 Note: Data were derived from quarter 1 of each year.

Overall, 63% of Latino respondents said that the cost of housing has impacted their living situation, notably higher than 44% of non-Latino respondents. Being unable to purchase a home is a reported impact for both Latino and non-Latino survey respondents, with 48% of Latino respondents and 53% of non-Latino respondents reporting this as an impact of the cost of housing. Forty-seven percent (47%) of Latino respondents reported living with family or friends, compared to 39% of non-Latino respondents, followed by moving when they did not want to (35% and 38%, respectively). When compared to 2018, higher percentages of Latino respondents in 2023 reported having to rent out rooms in their home and living in a housing unit without adequate plumbing, heat, or electricity, with the latter rising almost two-fold from 13% to 25%.

### HAS THE COST OF HOUSING IMPACTED YOUR HOUSING SITUATION?

## BECAUSE OF THE IMPACT OF THE COST OF HOUSING, HAVE YOU EXPERIENCED ANY OF THE FOLLOWING?

2018: Latinos N=223 respondents offering 520 responses; Non-Latinos N=136 respondents offering 233 responses  
 2023: Latinos N=221 respondents offering 459 responses; Non-Latinos N=134 respondents offering 254 responses  
 Source: Applied Survey Research. (2018 and 2023). Silicon Valley Latino Report Card, Telephone and Online Survey.  
 Note: Multiple response question. Percentages do not add up to 100%. In 2023, live temporarily with family or friends and live in an overcrowded unit were removed from the survey question, while can't afford to purchase a home and eviction were added. Additionally, sharing housing with other families was expanded to sharing housing with other families or friends.

When asked if they had to move farther away from their work in the last year as a result of the cost of housing, over one-quarter (26%) of Latino survey respondents indicated yes, twice the percentage of non-Latino respondents. A majority (58%) of Latino respondents experienced increased commutes of 31 minutes to one hour, compared to 41% of non-Latino respondents.

**AS A RESULT OF THE COST OF HOUSING, HAVE YOU HAD TO MOVE FARTHER AWAY FROM YOUR WORK IN THE PAST 12 MONTHS?**

Latinos N=382; Non-Latinos N=385  
Source: Applied Survey Research. (2023). Silicon Valley Latino Report Card, Telephone and Online Survey.

Survey respondents were also asked about the mental health impact of their increased commute. Seventy-seven percent (77%) of Latino respondents reported that the increased commute to work had impacted their mental health, compared to 71% of non-Latinos.

# OVERCROWDING | C\*

Overcrowding, according to the U.S. Census Bureau, is housing with multiple occupants per room in relation to the number of rooms and number of people living in a household.<sup>37</sup> Living in overcrowded housing conditions can have a negative impact on well-being and relationships, particularly for children.<sup>38</sup> It should be noted that this definition does not take into account cultural values and practices around multi-generational families cohabitating.<sup>39</sup>

Since 2016, the proportion of Silicon Valley Latinos living in overcrowded conditions has remained consistently higher than non-Latinos in Silicon Valley and Latinos statewide. In 2021, the percentage of Latinos living in overcrowded conditions in Silicon Valley was 17%, notably higher than non-Latinos in Silicon Valley (3%), while on par with Latinos statewide (17%). A higher proportion of Latinos were living in overcrowded conditions in Santa Clara County compared to San Mateo County in 2021.

## POPULATION LIVING IN OVERCROWDED<sup>1</sup> CONDITIONS

Source: United States Census Bureau. (2023). 2016-2021 American Community Survey (ACS) 1-year estimates.  
 Note: The US Census Bureau did not release its standard 2020 ACS 1-year estimates because of the impacts of the COVID-19 pandemic.  
<sup>1</sup>Overcrowding is defined as having one or more persons per room. In this definition "rooms" include living rooms, dining rooms, kitchens, bedrooms, finished recreation rooms, enclosed porches suitable for year-round use, and lodger's rooms. The number of rooms in combination with the number of people living in a unit provides a ratio of people to rooms, which is used to measure the extent of overcrowding in households.

## LATINOS LIVING IN OVERCROWDED<sup>1</sup> CONDITIONS, BY COUNTY

# HOMELESSNESS | D

Homelessness is often the result of the cumulative impact of many factors, rather than a single cause. The pathways into and out of homelessness reflect an intricate interplay between structural factors, systems failures, and individual circumstances. The scarcity of affordable housing in the United States, particularly in more urban areas, is a major structural barrier to acquiring or maintaining housing.<sup>40</sup> According to the 2022 national point-in-time estimates of homelessness, Latino homelessness is rising faster than for other groups – by 8% between 2020 and 2022. People identifying as Hispanic or Latin(a)(o)(x) make up 24% of the total number of people experiencing homelessness, but 19% of the total U.S. population.<sup>41</sup>

While the prevalence of Latino homelessness differs between Santa Clara and San Mateo counties, overall, the percentages of self-identified Latino individuals experiencing homelessness in Silicon Valley notably increased from 2013 to 2022. Latinos experience homelessness in Silicon Valley at rates disproportionate to their representation in the overall population. In 2022, Latinos comprised 47% of the estimated 10,028 people experiencing homelessness in Santa Clara County, compared to 25% of the overall county population. In San Mateo County, Latinos consisted of 47% of the estimated 1,808 people experiencing homelessness, compared to 25% of the overall county population.<sup>42</sup>

## INDIVIDUALS EXPERIENCING HOMELESSNESS, SAN MATEO COUNTY

Source: County of San Mateo Human Services Agency. (2023). 2013-2022 San Mateo County One Day Homeless Count and Survey.

Note: Like many communities, San Mateo County sought an exception from the U.S. Department of Housing and Urban Development to postpone the 2021 unsheltered Point-in-Time count until 2022 due to COVID-19 health and safety concerns.

## FAMILIES EXPERIENCING HOMELESSNESS IN SILICON VALLEY

Homelessness can have a tremendous impact on children's education, health, sense of safety, and overall development.<sup>43</sup> Families experiencing homelessness comprise roughly 28% of the total population experiencing homelessness in the United States. On a single night in 2022, an estimated 161,070 people in families were identified as experiencing homelessness. Nine in ten people experiencing homelessness in families with children were sheltered, while one in ten were in unsheltered locations in 2022.<sup>44</sup>

In 2022, 9% of the 10,028 people experiencing homelessness in Santa Clara County had children under the age of 18 living with them. Of these individuals, 70% identified as Hispanic or Latin(a)(o)(x). Twenty-one percent (21%) of the 1,808 people experiencing homelessness in San Mateo County had children under the age of 18 living with them. Of these individuals, over half (58%) identified as Hispanic or Latin(a)(o)(x).

## HOMELESS INDIVIDUALS WITH CHILDREN LIVING WITH THEM, 2022, BY COUNTY

# RACE/ETHNICITY AND HOUSING | F

According to County Health Rankings and Roadmaps, “Our collective health and well-being depend on opportunity for everyone. Yet, across and within [communities] there are stark differences in the opportunities to live in safe, affordable homes, especially for people with low incomes and people of color. These differences emerge from discrimination and institutional racism in the form of long-standing, deep-rooted and unfair systems, policies, and practices... that reinforce residential segregation and barriers to opportunity.”<sup>45</sup>

Over half (51%) of Latino survey respondents reported feeling that their race and/or ethnicity has impacted the quality or availability of housing in the county where they live, notably higher than 27% of non-Latino respondents.

DO YOU FEEL LIKE YOUR RACE/ETHNICITY HAS EVER IMPACTED THE QUALITY OR AVAILABILITY OF HOUSING IN THE COUNTY WHERE YOU CURRENTLY LIVE?

Latinos N=366; Non-Latinos N=366  
Source: Applied Survey Research. (2023). Silicon Valley Latino Report Card, Telephone and Online Survey.

<sup>45</sup>County Health Rankings and Roadmaps. (2023). Physical Environment. Retrieved from <https://www.countyhealthrankings.org/explore-health-rankings/county-health-rankings-model/health-factors/physical-environment> on March 13, 2023.

# IMPACT OF COVID-19 ON HOUSING

Forty-six percent (46%) of Latino survey respondents indicated that the COVID-19 pandemic negatively impacted their housing situation, nearly twice the percentage of non-Latino respondents. When asked about their experience, Latino respondents reported having to share housing with other families or friends, rent out rooms in their home, and move when they did not want to, as their top three impacts, while non-Latino respondents reported having to share housing with other families or friends, move when they did not want to, and live in a housing unit without adequate plumbing, heat, or electricity.

# ENVIRONMENTAL SUSTAINABILITY

The health and accessibility of the environment is an important part of the long-term health of a community. A connection to the surrounding environment helps community members build and maintain a healthy lifestyle, ensures that their natural surroundings are clean and safe, and helps to make sure these benefits are available for future generations.<sup>46</sup>

Latinos in Silicon Valley show a deep connection and concern for their surrounding environment. Survey results indicate that they are very concerned about various environmental issues including, the quality and accessibility of clean air and water, long-term effects related to climate change and global warming, and making sure quality parks and open spaces are available to the community. Latinos and non-Latinos alike responded that they regularly engage in behaviors to help conserve the natural environment for themselves and future generations. The responses from the Latino community indicate an improving relationship with the natural environment. This connection between community and the environment is vital to the long-term health of Latinos in Silicon Valley.

“Extreme weather driven by climate change is significantly impacting Latino families. The Latino community must be part of the transition to a carbon neutral economy for the long-term health and well-being of the Latino community in Silicon Valley.”

Daniel Cedeño  
Chief of Staff  
PG&E

# ASTHMA | A\*

Respiratory diseases like asthma affect millions of people in the United States. Strategies to reduce environmental triggers – like reducing air pollution – and make sure people get the right medications can help prevent hospital visits for asthma.<sup>47</sup>

From 2017 to 2021, the percentage of Latinos with asthma in Silicon Valley slightly increased and overall remained higher than Latinos across California and non-Latinos in Silicon Valley. In 2021, the asthma rate of all Latinos in Silicon Valley (16%) was higher than all Latinos across the state (13%), but on par with all non-Latinos in Silicon Valley (16%). Comparing asthma rates of Latinos by county, the asthma rate of Latinos in Santa Clara County increased from 11% in 2017 to 17% in 2021 and decreased in San Mateo County from 18% to 14% over the same period.

## PRO-ENVIRONMENTAL BEHAVIORS AND ATTITUDES | C\*

Most Latino and non-Latino survey respondents in 2023 reported recycling at home and taking efforts to save or conserve energy at home “frequently” or “always”. However, both groups reported less recycling and less conserving energy at home than in 2018. While most survey respondents did not own or use a diesel backup generator for their home or business, 33% of Latino respondents indicated operating a generator at least once, more than twice the percentage of non-Latino respondents (14%).

### HOW OFTEN DO YOU RECYCLE PAPER, PLASTIC, OR OTHER ITEMS AT HOME?

IN THE PAST 12 MONTHS, HOW OFTEN DID YOU OPERATE A DIESEL BACKUP GENERATOR FOR YOUR HOME OR BUSINESS?

Latinos N=379; Non-Latinos N=379  
 Source: Applied Survey Research. (2023). Silicon Valley Latino Report Card, Telephone and Online Survey.

In 2023, Latino survey respondents in Silicon Valley were more concerned than non-Latinos about environmental issues of water quality, air quality, power outages, quality of parks and open spaces, and climate change and global warming, except for water supply. Of these, the highest issue of concern among Latinos was climate change and global warming (59%). Water quality was the next most important issue, followed by water supply and air quality. Compared to Latino respondents in 2018, more Latino respondents in 2023 reported being “very concerned” about the environmental issues listed in the survey, with the highest percentage point increase being in water quality which rose from 37% to 43%.

## HOW CONCERNED ARE YOU ABOUT EACH OF THE FOLLOWING ISSUES? (SURVEY RESPONDENTS ANSWERING “VERY CONCERNED”)

 Note: The survey question was modified in 2023 to ask about power outages as an environmental issue. Additionally, climate change was expanded to climate change and global warming.

# METHODOLOGY

---

## **Geographic Scope of the Silicon Valley Latino Report Card**

For the purposes of this report, Silicon Valley is defined as Santa Clara and San Mateo counties.

## **Selection of Indicators**

For each of the Quality of Life (QOL) areas (Education, Health, Financial Stability, Housing, and Environmental Sustainability), the research team collected indicator data featured in the original report where available. Considerations for indicator selection included the extent to which indicators reflected critical and current issues, the extent to which indicators were generally accepted and understood, how many years data were available in the past and would be in the future, and to what extent data were broken out by ethnicity and geography (by county). Revised or wholly new indicators were included, as appropriate, based on the availability of data.

In 2011, an Advisory Board was convened to provide guidance in the research and development of the original 2011 Silicon Valley Latino Report Card. The advisory board's primary responsibility was to ensure that the report enticed the interest of a broad audience by presenting compelling data that stimulate dialogue and ultimately, action. The contributions made by the original advisory board were invaluable to subsequent updates of the report.

## **Data Collection, Survey Methodology, and Limitations**

Most data were gathered from secondary sources, including from national or state databases that featured county-level data, such as the U.S. Census Bureau, the U.S. Department of Housing and Urban Development, California Health Interview Survey, and California Department of Education. From these sources, data were combined for Latinos in Santa Clara County and Latinos in San Mateo County to create a Silicon Valley total. Non-Latinos across the two counties included individuals from all other ethnic groups.

Primary data were collected from a mixed-methods survey in 2018 and again in late 2022 to early 2023. In 2018 the survey captured the views of a total of 776 residents of Silicon Valley (395 telephone-based and 381 online surveys) and a quota was applied in order to garner a complete sample of both Latino and non-Latino residents. In 2022/23 the same quotas were applied resulting in 775 total surveys (279 telephone-based and 496 online surveys). Across both the 2018 survey and the 2022/23 survey, the Silicon Valley complete sample, as well as the samples for Latino/non-Latino residents provide a 95% confidence interval with a margin of error of +/- 5%.

While every effort was made to reduce risk and eliminate biases, it should be noted that all surveys have subtle and inherent biases. This study is influenced by self-selection bias, capturing only the opinions of those able and willing to spend approximately 20 minutes of their time to complete this survey.

# ASSIGNMENT OF GRADES

The grading methodology was determined originally with the consultation of the advisory board. The grading methodology is honored in this report for each indicator, offering incorporated grades on two criteria or domains wherever possible.

## Domain 1: Latinos' progress over time

The grade for the first domain was determined by the amount or 'net' change experienced by Latinos over time. In isolated cases that included non-proportional data, such as rates or mean scores, percentage changes were calculated instead. Time 1 was the first data point and Time 2 was the third data point for the last three years for which data were available. For example, if data were available for 2018, 2019, 2021, and 2022, Time 1 was 2019 and Time 2 was 2022.

NET CHANGE WITHIN LATINO GROUP OVER LAST 3 DATA POINTS

Grade	Scale definition
A	Gained 5.1 or more % points
B	Gained 1.1-5.0 % points
C	Maintained (changed 0-1.0% points)
D	Loss of 1.1-5.0 % points
F	Loss of 5.1 or more % points

## Domain 2: Comparison Reference Data

The grade for the second domain was determined by how far or close Latinos were to meeting the benchmark for that indicator, based on the most recent year for which there were data. In some instances, the comparison group was the overall population in Silicon Valley, because non-Latino data could not be disaggregated from the total population estimate. A traditional grading percentage system was used for Grade 2.

PERCENT ABOVE/BELOW COMPARISON OR NON-LATINO LEVEL

Grade	Scale definition
A	Met, exceed or were at 90-99% of the comparison or non-Latino/all persons levels
B	At 80-89% of the comparison or non-Latino/all persons levels
C	At 70-79% of the comparison or non-Latino/all persons levels
D	At 60-69% of the comparison or non-Latino/all persons levels
F	Below 60% of the comparison or non-Latino/all persons levels

Note that for indicators in which a lower number is desirable, (e.g., teen birth rates or mortality), and Latinos fared worse (higher) than the previous data point or comparison group, the appropriate scale was inverted.

To score the grades, an A was equal to 4 points, B=3 points, C=2 points, D=1 point, and F=0 points. Each indicator was scored based on its grades on each domain or criteria, and an average grade for that indicator was determined. For indicators comprised of multiple measures, an average grade was calculated for each and then an overall grade was determined for the overall indicator. The research team rounded up if rounding was necessary. To arrive at the overall grade for the QOL area, the individual indicators' grade scores (e.g. 4, 3, 2, 1 or 0) were summed and divided by the number of indicators in that QOL area, to arrive at an overall QOL grade.
